Contributors	xi
Editors' biographies	xv
Series editor's biography	xvii
Preface to the series	xix
Introduction	xxiii
Section A Interface formation: Theoretical aspect in epitaxial growth mechanisms, structural features and defects formation	1
1 Epitaxy of 5d transition metal oxide thin films and heterostructures	3
<i>J. Nichols, H.N. Lee</i>	
1.1 Introduction	3
1.2 Challenges and opportunities in thin film synthesis	4
1.3 Single-phase films	5
1.4 5d heterostructures and superlattices	16
1.5 Conclusions and future direction	19
Acknowledgments	20
References	21
2 Oxide superlattices by PLD: A practical guide	27
<i>G. Koster, M. Huijben, G. Rijnders</i>	
2.1 Introduction	27
2.2 Growth templates	29
2.3 Growth of superlattices (diagnostics); examples	32
2.4 Conclusions	50
References	51
3 Oxide molecular beam epitaxy of complex oxide heterointerfaces	53
<i>F. Baiutti, F. Wrobel, G. Christiani, G. Logvenov</i>	
3.1 Introduction	53
3.2 Oxide MBE system	54
3.3 MBE synthesis schemes	57
3.4 MBE growth control of oxide heterostructures	61
3.5 Cases of heterointerface study	64

3.6	Conclusions	72
3.7	Final remarks	73
	References	73
	Further reading	78
4	Electrochemical ionic interfaces	79
	<i>N.H. Perry, G.F. Harrington, H.L. Tuller</i>	
4.1	Introduction	79
4.2	Defects and transport in ionic conductors	80
4.3	Interfacial transport	84
4.4	Outlook	98
	Acknowledgments	99
	References	99
	Section B Experimental: Structural and compositional characterization techniques of metal oxides interfaces	107
5	In situ stress measurements of metal oxide thin films	109
	<i>A. Fluri, C.W. Schneider, D. Pergolesi</i>	
5.1	Materials engineering in heteroepitaxial thin films	109
5.2	Strain relaxation in epitaxial films: An overview of established principles and models	111
5.3	In situ strain or stress observation techniques	115
5.4	Application of in situ strain/stress monitoring techniques	123
5.5	Summary and outlook	128
	References	129
6	Plume characterization in pulsed laser deposition of metal oxide thin films	133
	<i>S. Amoruso</i>	
6.1	Introduction	133
6.2	Experimental diagnostic techniques of the laser ablation plume	135
6.3	Plume dynamics of metal oxides in a background gas	137
6.4	Deposition rate of metal oxides in a background gas	144
6.5	Ion probe investigations of metal oxides in a background gas	146
6.6	Influence of the background gas on metal oxide thin films stoichiometry	148
6.7	Summary	154
	References	155
	Further reading	160
7	Photoemission of buried metal oxide interfaces	161
	<i>M. Sing</i>	
7.1	Introduction	161
7.2	Basics of photoemission spectroscopy	162

7.3	Photoemission of core levels	166
7.4	Photoemission of valence band	172
7.5	Conclusions and outlook	177
	Acknowledgments	178
	References	178
	Further reading	180
8	Functional material properties of oxide thin films probed by atomic force microscopy on the nanoscale	181
	<i>N. Balke, A. Tselev</i>	
8.1	Introduction to dynamic contact mode atomic force microscopy	181
8.2	Electrostatic forces in contact mode	185
8.3	Piezoelectric coefficients of ferroelectric materials	188
8.4	Dielectric tunability	190
8.5	Ionic motion in Li-ion conducting materials	193
8.6	Outlook	195
	References	196
	Further reading	201
9	Controlled atmosphere high-temperature scanning probe microscopy (CAHT-SPM)	203
	<i>K.V. Hansen</i>	
9.1	Introduction to high-temperature SPM	203
9.2	Importance of in situ and in operando local probing measurements	205
9.3	The CAHT-SPMs	206
9.4	In situ surface reduction of NiO by hydrogen between 312°C and 523°C	210
9.5	Local electrochemical measurements at 650°C to 850°C	214
9.6	Conductance mapping of LSM microelectrodes and correlation with complementary techniques	216
9.7	Strong cathodic polarization of PtIr-YSZ microcontacts at 650°C	218
9.8	High-temperature Kelvin probe force microscopy at 300–600°C	220
9.9	Outlook	221
	References	222
10	Scanning SQUID measurements of oxide interfaces	225
	<i>Y. Frenkel, B. Kalisky</i>	
10.1	Introduction to scanning superconducting quantum interference device (SQUID)	225
10.2	Introduction to scanning SQUID measurements of oxides	227
10.3	Superconductivity	229
10.4	Magnetism	229

10.5	LaMnO ₃ /SrTiO ₃	232
10.6	Current flow	235
	Acknowledgments	240
	References	240
	Further reading	242
 Section C Modeling and properties at the metal oxide interfaces		 243
11	First-principle study of metal oxide thin films: Electronic and magnetic properties of confined <i>d</i> electrons	245
	<i>Z. Zhong, Y. Lu</i>	
11.1	Transition metal oxides: <i>d</i> electron	245
11.2	Perovskite TM oxides: Symmetry and correlation	246
11.3	DFT and simplified TB model for bulk SrVO ₃	248
11.4	DFT results of thin films	249
11.5	Difference between bulk and thin films	250
11.6	The first change: Cutting the hopping term and intrinsic confinement effect	251
11.7	Additional effects from the surface/interface and spin-orbit coupling	254
11.8	Correlation effects on confined <i>d</i> electrons	255
11.9	Discussion of SrRuO ₃ (001) and (111) thin films	258
11.10	Summary	259
	References	259
 12	 Computational study of energy materials	 263
	<i>A. Choneos</i>	
12.1	Introduction	263
12.2	Atomic simulation methodology	263
12.3	The role of point defects in MO	268
12.4	Intrinsic defects in MoO ₃	270
12.5	Hydrogen defects in WO ₃	272
12.6	Oxygen diffusion in doped CeO ₂	276
12.7	Summary and future perspectives	279
	References	279
 13	 High-mobility two-dimensional electron gases at complex oxide interfaces	 283
	<i>Y.Z. Chen</i>	
13.1	Introduction	283
13.2	2DEGs at SrTiO ₃ -based oxide interfaces	284

13.3	Modulation-doping of oxide 2DEGs	296
13.4	Conclusions and remarks	298
	References	299
14	Strain and interfaces for metal oxide-based memristive devices	301
	<i>S. Schweiger, J.L.M. Rupp</i>	
14.1	Introduction	301
14.2	Fabrication of strained interfaces for mixed ionic-electronic multilayer conductors	304
14.3	Structural characterization of strained multilayer interfaces—A critical discussion of tools	310
14.4	Integration of strained multilayer oxides to ionotronic devices: Modulation of memristance through interfacial strain in multilayers	313
14.5	A case study on the system $\text{Gd}_{0.1}\text{Ce}_{0.9}\text{O}_{2-\delta}/\text{Er}_2\text{O}_3$	315
14.6	Summary and outlook	320
	References	322
	Section D Applications of metal oxide interfaces	329
15	Metal oxide thin film-based low-temperature-operating solid oxide fuel cell by interface structure control	331
	<i>J.-W. Son</i>	
15.1	What is solid oxide fuel cell (SOFC)?	331
15.2	Why low-temperature-operating SOFC (LT-SOFC) is interesting?	333
15.3	Operating temperature range of LT-SOFC	333
15.4	Approaches for lowering the operating temperature of SOFCs	334
15.5	Challenges in realizing proper metal oxide thin film structure in LT-SOFCs	335
15.6	Free-standing-membrane-based LT-SOFCs: Micro-SOFCs	339
15.7	LT-SOFCs fabricated over porous supports	345
15.8	Concluding remarks	354
	Acknowledgments	354
	References	355
16	Ionic conductivity of metal oxides: An essential property for all-solid-state lithium-ion batteries	361
	<i>C. Chen, R.-A. Eichel, P.H.L. Notten</i>	
16.1	MeO-based materials for all-solid-state LIBs	362
16.2	Thin film deposition for all-solid-state Li-ion micro-batteries	374
16.3	3D thin film deposition for all-solid-state Li-ion batteries	389
16.4	Mobility of Li-ions in all-solid-state batteries	395
16.5	Conclusions	399
	References	400

17	Nanoionics and interfaces for energy and information technologies	409
	<i>F. Chiabrera, I. Garbayo, A. Tarancón</i>	
17.1	Introduction to nanoionics: Beyond bulk properties	409
17.2	Origin of nanoionics effects: Local defects and interfaces	410
17.3	Strategies for the implementation of nanoionics in functional oxide thin films	422
17.4	Prospects for applications of nanoionics in metal oxide thin film-based devices for energy and information applications	427
	References	431
18	Thermoelectrics based on metal oxide thin films	441
	<i>H. Ohta</i>	
18.1	Introduction	441
18.2	Epitaxial films of oxide thermoelectrics	443
18.3	Two-dimensional electron system for oxide thermoelectrics	454
18.4	Summary and future prospect	460
	References	460
19	Ferroelectric and piezoelectric oxide nanostructured films for energy harvesting applications	465
	<i>A. Datta, D. Mukherjee, S. Kar-Narayan</i>	
19.1	Introduction	465
19.2	Ferroelectric oxide nanostructures with enhanced properties	466
19.3	Piezoelectric oxide nanostructures for energy harvesting	476
19.4	Outlook	481
	References	481
	Further reading	488
20	Redox-based memristive metal-oxide devices	489
	<i>C. Bäumer, R. Dittmann</i>	
20.1	Introduction	489
20.2	Basic mechanisms of redox-based memristive switching	491
20.3	Filamentary switching	493
20.4	Area-dependent switching	504
20.5	Switching kinetics	508
20.6	Fields of application	510
	References	514
	Index	523
